PROJECTS

- Tic Tac Toe game based upon java technology
- A portfolio website based upon html technology
- A website based on html & css technology Developed a replica of the Starbucks website with Html & Css and Bootstrap.
- A responsive website clone of swiggy food website using react library, tailwind css and a server made by node js for backend working and api data handling.
- A website containing calculator using html, css & javascript.
- A responsive website for food recipe management in which user can add/edit and delete his/her own food recipe and also can see multiple recipes using internet. In this project i have used html css & javascript for basic development of this website and the functioning of website is done by javascript and fetching data through api calls.
